

FlexiAssets®

FlexiAssets, the Fixed Assets module in Flexi's enterprise financial accounting suite FlexiFinancials, allows companies to track assets across multiple locations, departments, or companies, under multiple depreciation schedules and with references to underlying invoices and projects. FlexiAssets transactions — acquisitions, retirements, transfers, adjustments, depreciation — are recorded with validation against the FlexiLedger rules with desired GL effective dates while keeping accurate information about actual dates when business events occur.

Today, companies are expected to do more with less, improve their processes, implement tighter controls, and provide documentation about business processes. FlexiFinancials can help. All of the Flexi applications use a security model integrated with Windows. FlexiAssets seamlessly integrates with FlexiPayables, FlexiProjects, FlexiLedger, and FlexiPurchasing, and provides real-time posting of business transactions.

Powerful Asset Processing

- Auto or Manually Assign Asset Numbers
- Multiple Part Numbers per Asset

FlexiProjects

About Our Technology

Flexi's open, non-proprietary architecture is based on the latest Microsoft standards and tools. It supports industry standard databases such as Oracle and Microsoft SQL Server and allows for easy integration through Web services. The Flexi applications utilize Microsoft SharePoint to provide browser based, enterprise-wide content portal and workflow capabilities.

About Flexi Software

Founded in 1991, Flexi develops, markets, and supports FlexiFinancials, workflow-driven enterprise accounting solutions for companies in select industries including Banking, Insurance, and Financial Services. Flexi distributes its products directly and through strategic partnership agreements. Through many successful deployments Flexi has a proven track record of low cost of ownership, ease of use and improved business processes.
