

FlexiAnalysis

FlexiAnalysis is a reporting and analysis tool that provides accountants and financial analysts insight into their business with a simple-to-use interface and leverages a familiar tool: Excel. A self-service BI tool designed for **Accounting Power Users**, and not BI architects or developers, FlexiAnalysis gives finance users the ability to create graphs and analytical pivots with a simple **drag and drop** interface. **Out of the box**, it comes connected to various FlexiFinancials modules such as FlexiPayables, FlexiReceivables, FlexiLedger, FlexiAssets and FlexiProjects, and removes the complexity and mystery of how data is stored within the application's database.

You no longer need to ask your IT resources to build yet another report or data extract and then troubleshoot it for weeks. You can create sophisticated data tables and **interactive charts and graphs**, all by using Excel while connected to **live data** in your accounting system. Slicers, filters, drill downs and different presentation forms give you the flexibility to interact with your data in an intuitive way. You can always save your work for future reference and update it with new data at any time with a single click.
